

IGe-referral Service

IGspectrum services meet data protection legislation and are IG Toolkit compliant.

All services are cloud based with access from any supported browser with a typical contract term of 12 months covering hosting, service management, support and upgrades.

Provision is from a secure ISO27001 accredited facility with a N3 connection available.

IGe-referral Service

This generic electronic referral service, with integrated workflow management, provides a centralised, intuitive platform on which referrals can be completed, distributed, accessed and managed using any web browser device. Rules and workflows for completing referral forms are fully automated and information is captured, stored securely and made available in a fully controlled manner to all that require access.

Referrals can be made intra and inter-organisation. This service can also be accessed for patient self-referrals e.g. Antenatal referrals. Open or closed referral groups can be created and managed with referrers and recipients provided with a dashboard of filtered and prioritised referrals.

Full alerting is incorporated and updates to the referral or requests for further information can be provided by both the referrer and the recipient. Any new information is automatically distributed to all those concerned with the referral.

IGspectrum Limited

82 St John Street, London, EC1M 4JN

Tel: +44 (0) 20 7262 8612

Registered Office: Wyvern House, 55-61 Frimley High St, Frimley, Surrey GU16 7HJ
Company Registration Number: 7925267; VAT Registration No: 127 9955 66

Features & Benefits

- Secure online form submissions using any internet-enabled device with a simple e-form creation and digitisation process requiring no software installation all of which enables a rapid and easy deployment of the application
- Secure system access with data held in an encrypted database meeting all the confidentiality requirements of the IG Toolkit together with a full governance and audit capability
- Flexible navigation and image management functions provide ease of use
- Automated workflow and embedded approval process which ensures security, consistency and currency of information and status for referrals and queries with information available and interchangeable between both referrers and recipients which enhances communication
- Standardised department standards for handling referral/queries enabling a common approach to their management which supports flexible utilisation of resources
- On-line data validation resulting in -increased data accuracy
- Different levels of user access to submit and view referrals/queries so that only approved and relevant information is shared
- Subsequent updates to the referral/query are distributed as appropriate providing a consistent, secure and current view for all parties
