

IGspectrum Service Catalogue

IGspectrum services meet data protection legislation. IGspectrum is IG Toolkit compliant.

All services are cloud based with access from any supported browser with a typical contract term of 12 months covering hosting, service management, support and upgrades.

Provision is from a secure ISO27001 accredited facility with a N3 connection available.

More details can be found at www.igspectrum.com and are also available through the Government [G-Cloud](#).

IG Subject Access Requests (IGsar)

This service facilitates secure and controlled on-line access to Patient Medical Records for a variety of purposes including clinical care and to satisfy Subject Access Requests (SAR) under the Freedom of Information (FOI) Act.

IG Platform as a Service (IGpaas)

This flexible, scalable and compliant platform provides the highest level of security to Healthcare systems providers without the cost and timescales involved in developing and commissioning their own infrastructure and platforms.

IG Patient Portal (App and Web Service)

An innovative, web based patient portal that enables patients, and their referrers, to interact directly with Trusts or care organisations. The system has been accredited under the Cabinet Office Risk Management and Accreditation (RMAD) process. Access to the portal is by using any web-enabled device. The web service is mirrored by a smartphone app which is available from the Apple and Google app stores.

IG Encryption service (IGencrypt)

The data encryption process operates to the AES 256 standard and supports complete anonymisation of all correspondence in documents and files to clinics, health and social care professionals, and patients. Encrypted information may be reconstituted following authorisation at no charge subject to the necessary credentials being presented.

IGspectrum Limited
82 St John Street, London, EC1M 4JN

Company Registration Number: 7925267; VAT Registration No: 127 9955 66

IG Data Pseudonymisation Service (IGpseudo)

Enables sharing of patient confidential data pseudonymised at source conforming to: Pseudonymisation Implementation Project DOH 2010 IGTK requirements for compliant, safe, ethical and secure sharing of data across communities and operates within applicable frameworks.

IG Electronic forms (IGe-forms)

This electronic forms based service, with integrated workflow management, provides a centralised, intuitive platform on which forms can be automated, distributed, accessed and managed using popular web browsers. Rules and workflows for completing forms are fully automated and information is captured, stored securely and made available to all that require access. Forms can be distributed intra and inter organisation. A dashboard provides an summary view of the status of all e-forms in which the user has an involvement.

IG Referral (IGreferral)

This referral service, with integrated workflow management, provides a centralised, intuitive platform on which referrals can be automated, distributed, accessed and managed using popular web browsers. Rules and workflows for completing forms are fully automated and information is captured, stored securely and made available to all that require access. Referrals can be made intra and inter organisation. This service can also be accessed for patient self-referrals e.g. Antenatal referrals. Open or closed referral groups can also be created and managed with senders and recipients provided with a dashboard of filtered and prioritised referrals.

IG Data Sharing Reference Portal (IGdsp)

A unique portal that provides a single web based repository holding all reference documents e.g. Information sharing frameworks, protocols, agreements. Records and evidence can be shared on PIAs and Risk Assessments and the service facilitates signoffs by both Caldicott Guardians and DPOs. The service provides a set of comprehensive automatic alerts when agreements and registrations are shortly to expire and then sends alarms if they are allowed to expire.. The service has recently been enhanced to provide true multi-agency support.

IG Application, Network and WIFI security testing (IGsecurity)

Our CREST/CISSP service includes penetration testing of Firewalls, VLANS, networks, applications and Wi-Fi with remote connections. Comprehensive testing includes attempts on DNS zone transfers, enumeration of services, OS detection and build version fingerprinting, password attacks, firewall traversal attacks, email spoofing and mail / web/ relay tests, back-door discovery and uploads.
